Risk and reward profile

The Risk and Reward Indicator table demonstrates where the Fund ranks in terms of its potential risk and reward. The higher the rank the greater the potential reward but the greater the risk of losing money. It is based on past data, may change over time and may not be a reliable indication of the future risk profile of the Fund. The shaded area in the table below shows the Fund's ranking on the Risk and Reward Indicator.

Typically lower rewards, lower risk ← → Typically higher rewards, higher risk

- This Fund is ranked at 6 because funds of this type have experienced high rises and falls in value in the past.
- Please note that even the lowest risk class can lose you money and that extreme market circumstances can mean you suffer severe losses in all cases. The indicator does not take into account the following risks of investing in this Fund:
- Exchange rates: Investing globally can bring additional returns and diversify risk. However, currency exchange rate fluctuations may have a positive or negative impact on the value of your investment.
- Concentrated portfolio: The Fund may hold a limited number of investments. If one of these investments declines in value this can have a greater impact on the fund's value than if it held a larger number of investments.

The charges you pay are used to pay the costs of running the Fund, including the costs of marketing and distributing it. These charges reduce the potential growth of your investment.

These are the maximum charges that we might take out of your money before it is invested and before we pay out the sale proceeds of your investment. In some cases, you might pay less and you should speak to your financial adviser about this.
